BARAA ELDEIRAWI

SDET | QA Automation Engineer

Chicago, IL • (708) 228-3155 • beldeirawi@gmail.com • linkedin.com/in/baraa-eldeirawi • github.com/beldeirawi01

SUMMARY

Computer Science student (B.S., University of Illinois at Chicago, Dec 2026) targeting SDET and QA automation roles. Built a Playwright and TypeScript Page Object Model framework covering UI and API tests, run in a cross-browser GitHub Actions pipeline, plus a full-stack TypeScript app with integration tests. Completed a 5-month SDET bootcamp covering Playwright, Cypress, API testing and SQL verification. Bilingual in English and Arabic.

TECHNICAL SKILLS

- **Test Automation:** Playwright, Cypress, Test Automation Frameworks, Page Object Model, End-to-End (E2E) Testing, Integration Testing, Regression Testing, Smoke Testing, Functional Testing, Cross-Browser Testing, Data-Driven Testing, Test Fixtures, Flaky Test Mitigation
- **QA Practices:** Manual Testing, Agile/Scrum, QA Methodologies, Test Planning, Test Case Design, Defect Tracking & Bug Reporting, Test Reporting, SQL Data Verification
- **API Testing:** REST API Testing, Playwright API Testing, Postman, Authentication & CRUD Testing, Webhooks
- **Languages:** TypeScript, JavaScript (ES6+), SQL (PostgreSQL), Python (basic), HTML5, CSS3
- **CI/CD & Tools:** CI/CD Pipelines, GitHub Actions, Git/GitHub, Jira, Linux CLI, Bash, VS Code, AWS (S3)
- **Application Development:** Node.js, Express, React, React Native (Expo), REST APIs, Prisma ORM
- **Foundations:** Data Structures & Algorithms, OOP, networking (TCP/IP, DNS)

PROJECTS

SauceDemo E2E Test Automation Framework & CI/CD Pipeline

Playwright, TypeScript, POM, API Testing, GitHub Actions github.com/beldeirawi01/sauce-demo-playwright-framework

- Built a Page Object Model framework in TypeScript (LoginPage, InventoryPage, CartPage, CheckoutPage) that keeps locators and actions separate from test assertions, so a UI change is fixed in one place.
- Wrote 63 automated tests (52 UI across 5 spec suites, 11 API) tagged @smoke, @regression and @api, covering login, product sorting, cart, checkout, logout and the site's built-in user personas (locked-out, problem, performance-glitch).
- Built an API suite with Playwright's request fixture against Restful-booker: authentication, booking CRUD, and negative cases such as requests rejected without a token. Each test creates its own data, so none depends on a shared service.
- Documented known defects (broken problem_user buttons, a 200 on bad API credentials, a 500 on a missing required field) as test.fail() tests, so the suite stays green and a test turns red if the defect is fixed.
- Used data-test locators, data files for credentials and customer edge cases, and custom fixtures (test.extend) that provide a logged-in session and pre-built page objects.
- Built a GitHub Actions pipeline that runs 167 executions (UI on Chromium, Firefox and WebKit, plus the API suite) on every push and pull request, and publishes the Playwright HTML report with failure screenshots and traces to GitHub Pages.

Offices-App (Jobscribe) — Full-Stack Voice-to-Invoice Platform

TypeScript, React, Node.js, Express, PostgreSQL, Prisma, AWS S3

- Built a field-service app for trades businesses with an Express REST API, a React dashboard and an Expo/React Native mobile client on PostgreSQL via Prisma.
- Built an asynchronous pipeline that uploads technician audio to AWS S3, transcribes it with OpenAI Whisper, and parses the transcript into structured JSON invoice line items with the Claude API.
- Integrated Stripe Connect payments with webhook event verification, Twilio SMS notifications and node-cron payment reminders.
- Wrote integration and validation tests for API contracts, database constraints, error-handling middleware and payload schemas across the client/server boundary.

EXPERIENCE

Installation Intern, Tech 1 Solutions — Chicago, IL | Aug 2026 – Present

- Install and terminate low-voltage Cat6 cabling in clinical environments using crimp and punch-down tools.
- Test each run with a cable tester to verify connectivity, and troubleshoot faults found on site.

Forklift Operator / Inventory Associate, Menards — Bridgeview, IL | Apr 2025 – Present

- Operate forklifts and track stock and order fulfillment data, supporting 50–75 transactions per shift with zero safety incidents.
- Redesigned the product fulfillment layout, cutting retrieval time by 15–20%.

EDUCATION & CERTIFICATIONS

University of Illinois at Chicago — B.S. in Computer Science — Expected Dec 2026

Moraine Valley Community College — A.S. in Computer Science — Dec 2023

Relevant coursework: Software Design, Database Systems, Programming Language Design, Intro to Data Science

SDET Professional Bootcamp (5 months) — QA methodologies, Playwright/Cypress automation, API testing, SQL verification
